ENTERPRISE SOFTWARE PROPOSAL

Church Membership, Subscription and Donation Management System

A modern, centralized web-based solution for church member registration, family hierarchies, automated recurring subscription ledgers, voluntary fund donations, and institutional financial reporting.

Stack: **PHP • React.js • MySQL**

Deployment: **Client Server (Cloud or Local On-Premise)**

Timeline: **3–4 Weeks (Single Turnkey)**

Proposed Investment: **BHD 450**

TARGET SOLUTION DOMAIN

Church Administration & Financial Governance

Centralized Membership, Subscription & Donation Operations

PREPARED BY (VENDOR)

SaNDS Lab Middle East W.L.L.

Trichur Infopark • Excellence Since 2008

PROJECT TIMELINE (ONE LINE ITEM)

3 – 4 Weeks

Complete end-to-end implementation

TOTAL DEVELOPMENT COST (ONE LINE ITEM)

BHD 450 (Bahraini Dinars)

Fixed turnkey price • All core functional modules

01 Executive Summary

Churches and religious communities shoulder unique administrative and pastoral responsibilities. Managing hundreds or thousands of faithful members, maintaining accurate family trees, recording monthly subscription obligations, and tracking voluntary donations require a structured, tamper-proof, and audit-ready digital system.

SaNDS Lab Middle East W.L.L. is delighted to submit this comprehensive software proposal to develop and deploy the **Church Membership, Subscription and Donation Management System**. Designed as a modern, web-based platform powered by **PHP, React.js, and MySQL**, the system centralizes member records, automates monthly subscription dues, enforces financial controls on collections, and delivers instant analytical registers for church leadership.

CENTRAL MEMBER HUB	AUTOMATED SUBSCRIPTIONS	DONATIONS & FUNDS	AUDIT-READY REGISTERS
Auto roll numbering, family linking & digital doc archive.	Dues calculation, partial allocations & receipts.	Voluntary offerings, building fund & instant receipts.	Categorized financial, donation & audit registers.

02 Table of Contents

Section	Proposal Content & Topic	Page Reference

11.0 – 14.0	**Testing, 90-Day Warranty, Future Roadmap & Sign-Off Authorization**	Page 12

> **Proposal Note on Scope:** Per requirement guidelines, the **Project Timeline (3–4 Weeks)** and **Commercial Proposal (BHD 450)** are presented as unified, single line items, providing church leadership with guaranteed cost predictability and turnkey accountability.

1.0 Project Overview

The **Church Membership, Subscription and Donation Management System** is a centralized, web-based software application engineered specifically to resolve the administrative, pastoral, and financial tracking challenges encountered by modern church organizations.

Traditional church recordkeeping frequently relies upon fragmented paper ledgers, disparate spreadsheets, and disconnected filing cabinets. This dispersed model introduces risks of duplicate entries, lost documents, omitted recurring subscription dues, and time-consuming manual financial reconciliations.

The proposed solution equips church clergy, administrative officers, and finance personnel with a cohesive, role-protected platform to register parishioners, link entire family households, maintain supporting identification and sacramental documents, generate automated monthly subscription billing schedules, and collect voluntary donations for special church funds.

2.0 Core Project Objectives

The primary objectives delivered by the implementation of this application encompass:

- ✓ **Centralized Parish Database:** Maintain single-point digital truth for all church members, family relationships, and contact details.
- ✓ **Unique Automated Roll Numbers:** Automatically generate non-duplicating church roll numbers (e.g., `CH-0001`) for every registered member.
- ✓ **Digital Document Repository:** Upload, securely store, and preview civil IDs, membership applications, and certificates.
- ✓ **Automated Monthly Subscriptions:** Establish monthly subscription rates, automatically raise dues schedules, and track payment histories.
- ✓ **Deficit & Overdue Tracking:** Instantly identify members with outstanding dues, partial payments, or extended arrears.
- ✓ **Donations & Designated Funds:** Record voluntary donations against specific funds (Building Fund, Charity, Festivals).
- ✓ **Church Funds & Offerings:** Record voluntary offerings, memorial gifts, and charity contributions with instant official receipts.
- ✓ **Subscription Receivables Control:** Accurately track dues raised, payments allocated, and net outstanding subscription balances.
- ✓ **Automated Official Receipts:** Generate sequential, branded payment receipts with one-click printing and digital PDF downloading.
- ✓ **Comprehensive Audit Registers:** Provide categorized registers for pastoral decision-making and annual parish meetings.
- ✓ **Financial Transparency:** Prevent unauthorized modifications or silent deletions of receipts through audit logging and reversals.
- ✓ **Universal Browser Accessibility:** Secure, responsive access on laptops, tablets, and desktops for authorized personnel.

Institutional Value Across Church Stakeholders

PASTORAL LEADERSHIP	FINANCE COMMITTEE	OFFICE ADMINISTRATORS
Complete demographic visibility over parish families, active members, and welfare needs.	Rigorous financial reconciliation, zero unrecorded payments, and clear donation registers.	Rapid 2-second member lookup, instant receipt reprinting, and streamlined monthly dues management.

Flexible Deployment Architecture: The application may be deployed on a cloud VPS or an on-premise local server within the church office as per client preference, provided and maintained directly by the client for complete data sovereignty.

3.1 User Login & Role-Based Access Control

Given the sensitive pastoral nature of member records and financial collections, the system incorporates strict **Role-Based Access Control (RBAC)**. Every church staff member is granted access strictly limited to their verified responsibilities.

SECURITY & AUTHENTICATION FEATURES

- ✓ Secure bcrypt password hashing and encrypted sessions.
- ✓ Granular role assignments with menu & action masking.
- ✓ Instant user activation, deactivation, and password reset.
- ✓ Immutable audit logging for all receipt creations and edits.

SYSTEM INTEGRITY CONTROLS

- ✓ Prevention of silent deletions of financial transactions.
- ✓ Two-step cancellation / reversal procedures for receipts.
- ✓ Protection against concurrent collection record overwrites.
- ✓ Automatic session timeout upon prolonged inactivity.

Configured User Roles & Permission Matrix

Assigned Role	Module Access & Operational Scope	Access Level
System Administrator	Full governance: user management, system master configuration, role rights, audit logs, and complete financial reporting.	**Full Super-Admin**
Membership Administrator	Register parish members, manage linked family hierarchies, upload supporting documentation, and update contact profiles.	**Read / Write (Membership)**
Finance / Cashier Officer	Record monthly subscription receipts, accept fund donations, print receipts, and view daily collection logs.	**Read / Write (Finance)**
Management / Auditor	Read-only inspection of membership rolls, subscription registers, donation statements, and executive dashboard metrics without edit rights.	**Read-Only (Governance)**

4.0 High-Level System Architecture

The application adheres to an industry-standard, decoupling **client-server architecture** consisting of three resilient tiers:

Tier 1 Frontend UI
Developed in **React.js**. Delivers a swift Single Page Application (SPA) with responsive screens, instant search filtering, real-time balance calculations, and clean print views.

Tier 2 RESTful API
Engineered in **PHP**. Implements business logic, validation gates, subscription scheduling algorithms, receipt sequencing, and secure token-based endpoint access.

Tier 3 Database Engine
Powered by **MySQL**. Structured relational schemas ensuring ACID transaction compliance, indexing on roll numbers, foreign key constraints, and isolated document metadata storage.

> **Security Framework:** All data transmissions are encrypted using standard HTTPS/TLS (or secure LAN protocols). Passwords utilize one-way salt hashing, SQL queries are executed via prepared parameterized statements, and file uploads are verified against strict MIME-type whitelists.

3.2 – 3.4 Membership, Family & Document Hub

This central module serves as the primary demographic directory of the church, maintaining complete profiles for individual parishioners, structured family hierarchies, and accompanying digital archives.

Member Registration & Details

The comprehensive registration interface captures complete member records:

- ✓ **Unique Roll Number:** Auto-generated system identifier (e.g., `CH-0001`) preventing duplication.
- ✓ **Personal Profile:** Full Name, Date of Birth, Gender, Marital Status, Occupation, and Profile Photo.
- ✓ **Contact & Locality:** Residential Address, Area/Locality, Mobile, Email, and Emergency Contacts.
- ✓ **Ecclesiastical Records:** Date of Joining, Membership Category, Sacramental Records, and Parish Status.

Family Hierarchy & Documents

Maintains full familial relationships without record redundancy:

- ✓ **Hierarchical Linking:** Attach Spouse, Children, and Parents directly under the designated Primary Member.
- ✓ **Family vs Individual Subscriptions:** Configurable billing against primary head of family or individually.
- ✓ **Digital Document Archive:** Upload civil IDs, baptismal certificates, and marriage documents (PDF/JPG).
- ✓ **Smart Member Filtering:** Search members by roll number, mobile, family name, or subscription status.

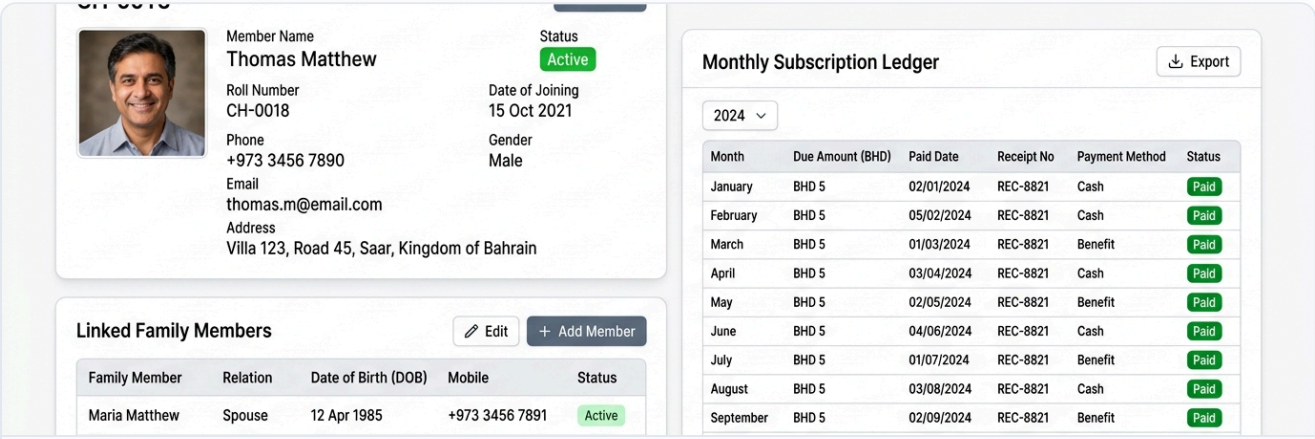

Figure 1: Member Profile & Family Hierarchy Module • Demonstrating Roll Number `CH-0018`, Linked Dependents & Integrated Subscription Ledger Interactive SaaS Interface

Consolidated Member 360° Profile: Authorized users can access any parishioner's complete ecclesiastical dossier from a single screen—including contact info, linked family members, uploaded certificates, and year-by-year subscription payment history.

3.5 Monthly Subscription Engine

Recurring monthly subscriptions represent the financial backbone of ongoing church operations. The system automates dues generation, tracks partial payments, monitors overdue arrears, and guarantees historical audit stability.

SUBSCRIPTION GENERATION & SCHEDULES

The system allows configuration of monthly subscription rates per member or family category. On a monthly cycle, the engine generates expected receivable entries, recording the effective date and retaining historical pricing rules even if future rates change.

STATUS CLASSIFICATION LIFECYCLE

Every monthly dues schedule is dynamically evaluated as:

- **Pending:** Unpaid dues within grace period.
- **Partially Paid:** Incomplete payment allocated.
- **Paid:** Full monthly obligation fulfilled.
- **Overdue:** Unsettled balance beyond deadline.

Practical Worked Example of Subscription Calculation:
If a parish member's monthly subscription is set to **BHD 5.000** and 6 months have elapsed without payment, the gross dues calculated are `6 × BHD 5 = BHD 30.000`. If the member makes a partial contribution of **BHD 20.000**, the engine allocates payments across the oldest 4 months (marking them **Paid**) while retaining a net receivable balance of **BHD 10.000**.

3.6 Collection Processing & Official Receipts

Designed for high-throughput during church services and office hours, the collection interface enables cashiers to record payments in fewer than three clicks.

Workflow Step	Cashier Action & System Functionality	Financial Control
1. Member Lookup	Search by roll number (e.g., `CH-0018`), mobile, or member name. System displays current dues instantly.	Prevents erroneous account posting.
2. Period Selection	Select specific months being paid, or auto-allocate from the oldest overdue period onward.	Guarantees chronological debt clearance.
3. Payment Method	Select payment tender: **Cash, Bank Transfer, BenefitPay, or Cheque** with reference numbers.	Streamlines bank reconciliations.
4. Instant Receipt	Generates unique sequential receipt number (e.g., `REC-2026-1048`) formatted for thermal/A4 printing & PDF download.	Official proof for parishioner records.

Receipt Numbering Control: All issued receipts are sequential, timestamped, and tied to the cashier's user ID. Any necessary correction requires a formal authorized reversal entry rather than silent deletion, maintaining a flawless financial audit trail.

3.7 – 3.8 Donations, Funds & Receivables Tracking

Churches regularly receive voluntary offerings, memorial contributions, and special development gifts. This module separates voluntary donations from recurring subscriptions while providing dedicated tracking for subscription receivables and dues aging.

Donations & Contribution Funds

Supports designated funds for targeted church initiatives:

- ✓ **Categorized Church Funds:** General Fund, Church Building Fund, Charity & Welfare Fund, and Festival Offerings.
- ✓ **Anonymous & Benefactor Donors:** Record contributions from visiting benefactors without requiring member roll numbers.
- ✓ **Instant Earmarked Receipts:** Immediate generation of official church donation receipts citing the designated fund.

Subscription Receivables Tracking

Complete monitoring of outstanding church dues:

- ✓ **Receivables Ledger:** Maintain member-wise subscription dues, payment allocations, and outstanding balances.
- ✓ **Arrears Ageing Analysis:** Filter members by overdue periods (30, 60, 90+ days) to simplify pastoral follow-up.
- ✓ **Exemptions & Adjustments:** Support authorized exemptions with full administrative approval records.

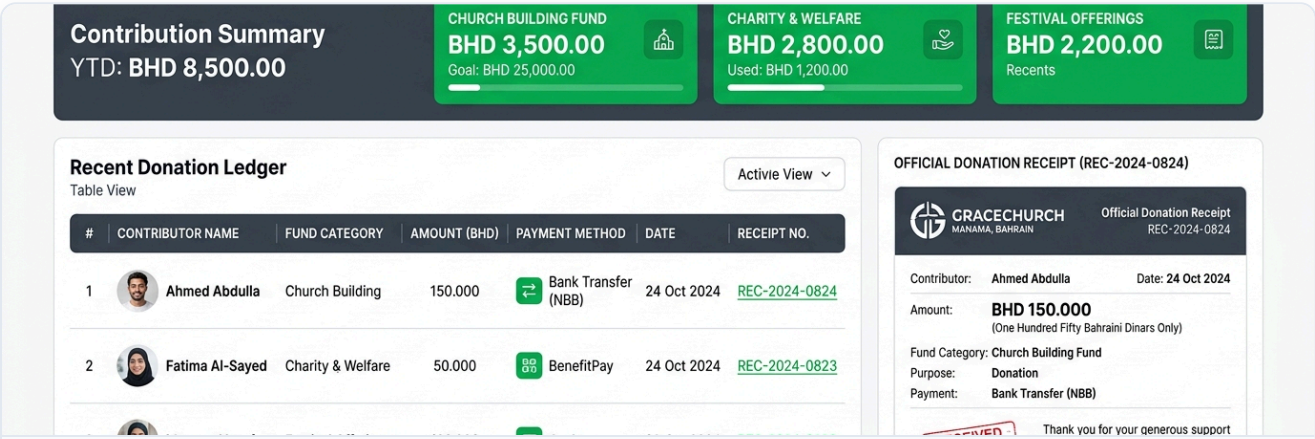

Figure 2: Donations, Earmarked Funds & Official Receipt Interface • Contribution Summaries, Fund Ledgers & Instant Printable Receipts Donations & Receipt Control

Receivables Governance & Accurate Fund Accounting

To ensure strict financial accuracy, recurring membership subscriptions and voluntary fund donations are accounted for under dedicated registers. The system tracks all receivables using the formula: `Net Outstanding Balance = Total Dues Raised – Total Payments Allocated – Authorized Exemptions`.

> **Donation Worked Example:** A benefactor contributes **BHD 150.000** toward the Church Building Fund via Bank Transfer. The cashier records the transaction under the Building Fund category, and the system instantly updates the fund ledger and issues Official Donation Receipt `REC-2024-0824` with digital PDF and thermal print capabilities.

3.9 – 3.10 Dashboard & Institutional Registers

The system provides church leadership with real-time visibility through an executive analytics dashboard alongside comprehensive exportable registers and financial reports.

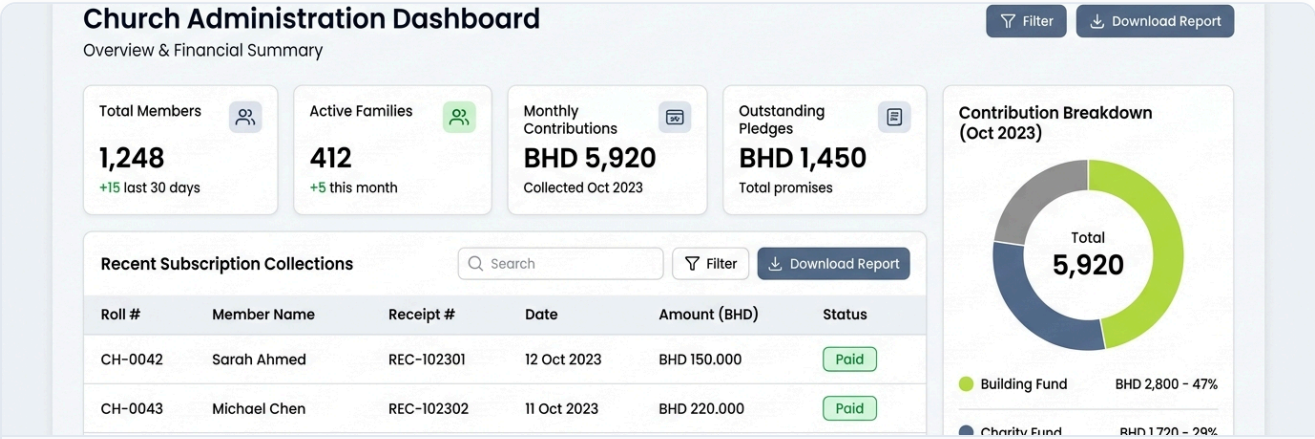

Figure 3: Executive Financial Dashboard • Visual KPI Cards, Contribution Breakdown Doughnut & Live Collection Feeds

Real-Time Intelligence

Catalog of System Registers & Reports

MEMBERSHIP & FAMILY REGISTERS

- ✓ Master Parishioner Directory & Member Dossier Report
- ✓ Family Relationship Register & Dependent Records
- ✓ Locality & Area-wise Member Distribution
- ✓ Active vs Inactive Parishioner Audit Register

SUBSCRIPTION & OVERDUE REGISTERS

- ✓ Monthly Subscription Generation & Demand Ledger
- ✓ Member-wise Subscription Payment History Ledger
- ✓ Overdue & Arrears Ageing Analysis Register
- ✓ Partial Payment & Authorized Exemption Register

DONATION & CONTRIBUTION REGISTERS

- ✓ Designated Fund Collection Breakdown (Building, Charity)
- ✓ Category-wise & Contributor-wise Donation Registers
- ✓ Date-wise, Month-wise & Annual Contribution Summaries
- ✓ Official Contribution Receipt Archive & Audit Log

RECEIVABLES & CASHIER REGISTERS

- ✓ Consolidated Church Subscription Receivables Statement
- ✓ Daily Cashier Collection & Tender Method Register
- ✓ Cancelled & Reversed Receipt Audit Trail
- ✓ One-Click Export to Excel, CSV, and High-Res PDF

Master Data Configuration (Section 3.12): The church retains full autonomy to update master data tables—including subscription rates, fund categories, areas, relationship types, and user permissions—without requiring technical source code modifications.

4.1 Technology Stack & Specifications

Architecture Component	Selected Technology	Technical Rationale & Capability
Frontend Framework	React.js (Single Page App)	High responsiveness, dynamic filtering, modern SaaS component architecture.
Backend REST API	PHP 8.x (Modern Architecture)	Mature, reliable, lightweight server-side execution with fast execution cycles.
Relational Database	MySQL 8.x Engine	ACID-compliant transactions, foreign key enforcement, reliable backup capability.
Web Server Environment	Apache / Nginx on Linux	Industry standard, high-concurrency web server with robust security modules.
Report & Export Engines	PDF & Excel / CSV Generators	Instant browser printing and spreadsheet data export for parish committees.
Server Deployment	Client-Provided Server (Cloud / Local)	Supports Cloud VPS or Local Server as per client wish; ensures data ownership.

5.0 7-Phase Structured Implementation Methodology

SaNDS Lab executes projects utilizing a disciplined software development lifecycle (SDLC):

Phase 1: Requirements & Roll Rules
Conduct consultative meetings with church leadership to lock member registration fields, roll number formatting conventions, and subscription policies.

Phase 2: UI/UX & Schema Architecture
Design intuitive screen prototypes, relational database schemas, foreign key indices, and RESTful API endpoint specifications.

Phase 3: Core Membership Development
Construct user authentication, member registration, automated roll numbering, linked family trees, and digital document uploads.

Phase 4: Subscriptions & Receipts Engine
Build recurring dues generation logic, cashier collection interfaces, multiple tender options, and automated printable receipts.

Phase 5: Donations & Receivables Engine
Implement designated charitable funds, voluntary donation recording, donation receipts, and subscription receivables tracking.

Phase 6: Analytics Dashboard & Reports
Develop the executive financial dashboard alongside the complete catalog of exportable registers in Excel, CSV, and PDF formats.

Phase 7: Comprehensive Testing, Server Deployment, Training & Handover
Rigorous mathematical verification of dues calculations, permission security checks, staging deployment on client server, hands-on user training for office staff, and production go-live handover.

6.0 Project Implementation Timeline (Single Line Item)

In accordance with the agreed proposal requirements, the project timeline is presented as a **single unified turnkey schedule**, encompassing all requirements finalization, custom software engineering, server deployment, and staff training:

S.No	Implementation Scope & Complete Solution Deliverable	Estimated Duration
01	**Complete Church Membership, Subscription & Donation Management System** End-to-end delivery: Requirements analysis & finalization, UI/UX interface design, relational database architecture, core membership directory & roll number generation, family relationship hierarchies, member document repository, monthly recurring subscription generation engine, collection processing & printable receipt generation, designated donation funds, subscription receivables tracking, executive financial dashboard, categorized registers and export tools, system security hardening, client server production deployment, administrative & user training, and formal project handover.	**3 – 4 Weeks** From project commencement

7.0 Commercial Proposal (Single Line Item)

The commercial investment is presented as a **single fixed-price turnkey line item** covering the complete scope of development, deployment, training, and initial warranty:

S.No	Software Solution & Comprehensive Scope of Work	Fixed Total Investment
01	**Church Membership, Subscription & Donation System — Full Turnkey Solution** Complete software development of all core modules, React.js frontend, PHP RESTful API backend, MySQL database design, automated roll number formatting, digital document management, subscription dues engine, cashier collection interface, donation & fund management, executive analytics dashboard, exportable registers, server deployment (cloud or local), comprehensive administrator & cashier staff training, handover documentation, and **90-Day Post-Deployment Warranty Support**.	**BHD 450** Bahraini Dinars Four Hundred Fifty Only

7.1 Milestone-Based Payment Structure

Milestone	Project Delivery Milestone Description	Percentage	Amount (BHD)
Milestone 1	**Upon Project Confirmation:** Contract Signing, Requirements Sign-off & Mobilization Advance	50%	BHD 225.000
Milestone 2	**Upon First Level Testing:** Completion of Core Modules, Initial Verification & Handing Over to the Church Server	40%	BHD 180.000
Milestone 3	**Upon Final Handover:** User Acceptance Testing (UAT), Staff Training, Production Deployment & Handover	10%	BHD 45.000
Total Proposed Development Cost		100%	BHD 450.000

> **Commercial Terms Note:** Invoices will be formally issued upon the successful attainment and verification of each milestone as stated above. Payment is due within 7 business days of milestone invoice issuance.

8.0 Server & Deployment Requirements

The server environment may be deployed on a **cloud server (Cloud VPS) or a local on-premise server** as per the client's preference, and will be provided and maintained directly by the client. SaNDS Lab will handle full application installation and configuration on the client-supplied environment.

Component	Recommended Configuration	Operational Role & Technical Purpose
Server Environment	Cloud VPS OR Local Office Server (Client's Choice)	Flexible deployment based on client operational and network preference.
Operating System	Supported Linux (Ubuntu / Debian LTS)	Reliable, cost-effective, open-source server operating environment.
CPU & RAM	2 vCPU / Quad-Core • 4 GB RAM (Expandable)	Adequate capacity for concurrent staff operations & register exports.
Storage Capacity	80 GB SSD / Fast Storage	Dedicated drive space for MySQL database and digital member document archives.
Runtime & Engine	PHP 8.x Release • MySQL 8.x Server	Optimized database and API services for fast transaction recording.
Network / Web Server	Apache / Nginx • Static IP / Local LAN / Domain	Accessible via church office LAN or secure domain over SSL/HTTPS.

9.0 Project Assumptions

- ✓ The application will be developed as a secure web-based system.
- ✓ The client will provide the server (cloud or local) and deployment access.
- ✓ The scope covers a single church organization under agreed terms.
- ✓ Member roll numbers & receipt formats will be finalized before build.
- ✓ Client will provide member registration fields and sample documents.
- ✓ Subscription rates & collection policies will be finalized in Phase 1.
- ✓ Donation funds and contribution categories are fully configurable.
- ✓ English will serve as the primary user interface language.
- ✓ Client will designate representatives for UAT approval and sign-off.
- ✓ Hardware, OS maintenance, and backup media are managed by client.

10.0 Project Exclusions

- ✓ Hardware purchasing, cloud server hosting fees, and electricity/UPS costs.
- ✓ Domain name registration, renewal, and static IP ISP connection charges.
- ✓ Paid third-party SMS, WhatsApp, or bulk email API service fees.
- ✓ Online payment gateway integration (Credit/Debit/BenefitPay APIs).
- ✓ Native iOS or Android mobile applications on App Stores.
- ✓ Automated direct bank feed integration or bank reconciliation.
- ✓ Integration with external enterprise third-party accounting ERPs.
- ✓ Manual historical record cleaning beyond standard Excel import formats.
- ✓ Advanced corporate accounting (general ledger, balance sheets, P&L).
- ✓ Multi-church or multi-branch parish network management.

> **Scope Governance:** Any requirements, integrations, or customizations outside the specifications defined in this proposal can be evaluated and quoted separately as a subsequent enhancement phase.

11.0 – 13.0 Quality Assurance, Warranty & Roadmap

USER ACCEPTANCE (UAT)

System undergoes functional verification, mathematical balance checks, and role security testing. Church representatives validate features against approved specs before go-live.

90-DAY WARRANTY INCLUDED

Includes **90 days of defect correction warranty** post-deployment at no additional charge to ensure complete peace of mind and operational stability.

FUTURE GROWTH ROADMAP

Easily extensible in Phase 2 for: automated WhatsApp/SMS dues alerts, online payment gateway (BenefitPay/Credit Card), and member mobile self-service portal.

14.0 Conclusion & Corporate Credentials

The proposed **Church Membership, Subscription and Donation Management System** provides the church with a rock-solid, institutional foundation to maintain member relationships, automate subscriptions, record donations, and safeguard financial integrity.

With over 17 years of technical excellence since 2008, **SaNDS Lab Middle East W.L.L.** brings deep software engineering expertise, localized Middle East delivery experience, and responsive post-deployment support. We look forward to partnering with church leadership on this vital initiative.

Proposal Acceptance & Project Authorization

Signing below signifies acceptance of the technical scope, single line item timeline (3–4 Weeks), development cost (BHD 450), payment milestones (50% / 40% / 10%), and terms outlined in this proposal.
